

DOWNLOAD EVENT // COMPLETED

Thanks for downloading Jake's Browser Sec file

Here's a digital pizza. You earned it.

WHY THIS EXISTS

As a security practitioner, it's important to test controls and policies — not just assume they're working. My hope is that you can use this site to test several controls across the browser security space, learn what your tooling actually sees, and stay up-to-date on all things browser security.

```
● ● ● browser-sec://download-test

> event          file_download
> result         success
> malware        nope
> pizza_reward   unlocked [DIGITAL ONLY]
```

01

TRIGGER IT

Download, upload, navigate, authenticate. Create the signal on purpose.

02

WATCH IT

Check what your browser security controls, logs, and policies actually detect.

03

LEARN IT

Use the result to tune controls, validate assumptions, and sharpen your browser security instincts.

A controlled test. A real signal. An extremely fake pizza.

Jake's Browser Sec // No malware. No tracking pixel. No actual pizza was harmed.

STAY CURIOUS. TEST THE BROWSER.
