

Push Security

Browser Security for the AI Era

■ Congratulations, Security Tester! ■

You successfully downloaded this file. Push Security saw everything.

You just earned a Digital Pizza! ■

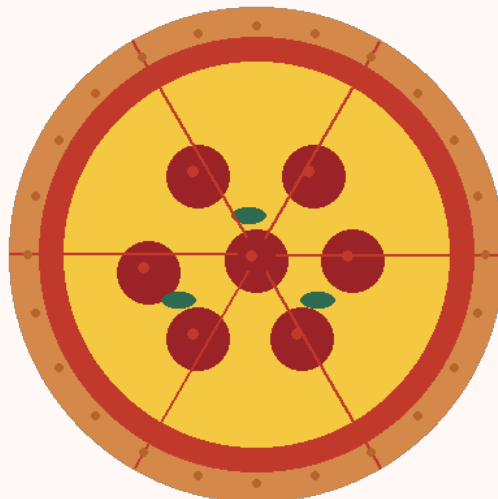

That's right. By clicking 'Download', you triggered a Push Security file download detection event. Somewhere in a SOC dashboard, an alert just lit up. A security analyst spilled their coffee. A SIEM rule fired.

But YOU? You get a pizza. You earned it.

No phishing attempt. No malware. No stolen credentials.
Just a brave soul, testing browser security controls like a pro.

*"Congratulations on your first managed file download event.
We've alerted the pizza delivery system. ETA: 0 seconds.
(It's digital. Try the blockchain.)"*
